

# TLS ARCHIVE

## Flexible access to multimedia archives

TLS ARCHIVE provides you with flexible and equitable access to your multimedia archives either mounted on the web, on your CD ROM/DVD drive or both.

TLS ARCHIVE lets you manage your multimedia archive by providing thematic access. Thematic access is an important categorisation to help users manage the large amount of material available and limit access to what is relevant and appropriate.

TLS ARCHIVE provides your users with a tour guide to facilitate access to things they are not familiar with. Similar to real life, the guide provides information as to what is available, more important, more suitable, relevant etc. You can have many different types of guides, for example, a technical guide, a social guide, an industry specialist guide, a cultural guide, an expert guide. Guides can be tailored to suit the material and their area of expertise.

TLS ARCHIVE synchronises multimedia material so that users get superior engagement and quality experiences from your archival information. Synchronisation retains the essence and excitement of any live events and can add significantly to other types of information by simultaneously showing related information.

TLS ARCHIVE separates navigation from access. This makes it easier to add new material into the archive without extensive editing and disturbing existing material - we merely merge and sort

TLS ARCHIVE utilises state-of-the-art indexing know how to provide a flexible navigation facility throughout the archive. We rely on the intelligence and experience of human indexers to understand the content of an item and provide the access you expect.

TLS ARCHIVE collates thematic indexes and the complete archive index from the individual material indexes. The creation of the appropriate links is automatic.
